As known, tyres 5.90-13 our a. m. models are equipped with are only approved for vehicles with a maximum speed of 93.2 mph according to general instructions of the tyre manufacturers.

The load valid for the tyres in regard to the speed is therefore limited in the same order in which we state the maximum speed of our a. m. models. Certainly the top speed obtained may differ somewhat from the quoted value of 93.2 mph, and small tolerances of about + 3.1 mph are absorbed by the tyres forthwith, since a certain amount of safety factors has been taken into consideration.

However, we would like to point out in this connection that sports drivers in particular often have modified the engine in order to obtain an increased speed range and consequently a better top speed. Since these operations are lastly carried out only by sports drivers in order to make provisions for faster driving, it must be taken into account that the admissible speed limitation for tyres is often exceeded, even for longer time periods.

In such cases we recommend you to replace tyres by the type 6.40-13 "Special" in connection with disc wheels of the size 4 1/2 K x 13 or 4 1/2 J x 13.

These tyres are approved up to a maximum speed of 108.74 mph, thus there is enough latitude in the upper speed ranges for further increase of speed.

Finally we would like to point out that the tyre size 5.90-13, tyre "Special", is no longer supplied by the tyre manufacturers. Equipment with the next size (6.40-13 "Special") is therefore necessary.

Please, instruct all drivers among your customers according to this information to whom the a. m. conditions are applicable.
